140 Database :

Pred. No. is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                               inquences: clouetrequesteranger.ac.ux
On Jun 28, 2001 this sequence version replaced gi:14456172.
During sequence assembly data is compared from overlapping clones.
During sequences are found these are annocated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.

This sequence was finished as follows unless otherwise noted: all regions were either double stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality) as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one M13 subclone; and the assembly was confirmed by restriction digest. The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases: Emb.; Sw.; SWISSPROT; Tr.; TRENBL; WORMPEP; Information on the WORMPEP there are not a second to associate primary accession numbers of the accession of the wormpressions of the second to a second to a second to a second to a second to a second to a second to a second to a second to a second to a second to a second to a second to a second to a second to a second to a second to a second to a second to a second to a second to a second to a second to a second to a second to a second to a second to a second to a second to a second to a second to a second to a second to a second to a second to a second to a second to a second to a second to a second to a second to a second to a second to a second to a second to a second to a second to a second to a second to a second to a second to a second to a second to a second to a second to a second to a second to a second to a second to a second to a second to a second to a second to a second to a second to a second to a second to a second to a second to a second to a second to a second to a second to a second to a second to a 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          uctacase can be found a tour a cutacase can be found to the part of bacterial clone contigs of human chromosome 9, constructed by the Sanger Centre Chromosome 9 Mapping Group. Further information can be found at Chromosome 9 Mapping Group. Further information can be found at this sanger ac.uk/HGP/Chr9 RPII-9M16 is from the library RPCI-11.1 constructed by the group of Pieter do Jong. For further details see this see that is sequence is not the entire insert of clone RPII-9M16 It may be shorter because we sequence overlaping sections only once, except for a 100 base overlap. The true right end of clone RPII-9M16 is at 13292 in this sequence. The true left end of clone RPII-9M33 is at 124695 in this sequence. The true right end of clone RPII-82II is at 2000 in this sequence.

NOTE: This is a "working draft' sequence. It currently consists of 66 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      1002: contig of 1002 bp in length

Mapping information for this clone was provided by Dr. Wes Warren, Department of Genetics, Washington University, St. Louis MO. For additional information about the map position of this sequence, see http://genome.wustl.edu
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     This sequence was finished as follows unless otherwise noted: all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence from more than one subclone; and the assembly was confirmed by
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        NOTICE: This sequence may not represent the entire insert of this clone. It may be shorter because we only sequence overlapping clone sections once, or longer because we provide a small overlap between neighboring data submissions.
                                                                                                                                                                                                                                                                                                                              Direct Submission

                                                                                                                    COMMENT
```

```
During sequence assembly data is compared from overlapping clones. Where differences are found these are annotated as variations together with a note of the overlapping clone mame. Note that the variation amoration may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.

This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one Mil subclone; and the assembly was confirmed by restriction digest. The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases: Em; EMBL; Sw; SWISSPROY; Tr;, TREMBL; Wp;, WORMPBP; Information on the WORMPBP database can be found at the RPCI-23 Mouse PAC Library constructed by the group of Pieter de Jong.

393 AGTAGTATAATAATAATATTAGAGAGATACACAGAAAATATATAGAGAAGATAACAGTG

This sequence was finished as follows unless otherwise noted: all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence than one subclone; and the assembly was confirmed by restriction diest.

MAPPING INFORMATION:

```
Mapping information for this clone was provided by Dr. Wes Warren, Department of Genetics, Washington University, St. Louis MO. For additional information about the map position of this sequence, see http://genome.wustl.edu
```

The RPCI-24 BAC Library has been constructed by Pieter de Jong and coworkers (http://www.chori.org) from male C57BL/6J mouse spleen and/or brain genomic DNA. The clone and detailed information can be obtained from Pieter de Jong and coworkers at http://www.chori.org SOURCE INFORMATION:

NEIGHBORING SEQUENCE INFORMATION:
This sequence is the entire insert of the clone.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   * NOTE: This is a 'working draft' sequence. It currently consists of 9 contigs. The true order of the pleces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as * runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       5567: contig of 5567 bp in length 5667: gap of 100 bp 31753: contig of 26086 bp in length 31853: gap of 100 bp 53919: contig of 22066 bp in length 54019: gap of 100 bp 70286: contig of 16267 bp in length 70386: gap of 100 bp 156490: contig of 86104 bp in length 156590: gap of 100 bp 156590: gap of 100 bp 156999: contig of 13409 bp in length 170099: gap of 100 bp 179883: contig of 13409 bp in length 179883: contig of 7074 bp in length 187957: gap of 100 bp 18757: gap of 100 bp

It currently consists of 2 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

It currently consists of contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as 'uns of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Length 135904;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                NOTE: Estimated insert size may differ from sequence length (see http://www.hgsc.bcm.tmc.edu/docs/Genbank draft data.html).

NOTE: This is a 'working draft' sequence. It currently consists of 26 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        1368: contig of 1368 bp in length 1468: gap of unknown length 3011; contig of 1414) bp in length 3011; gap of unknown length 14181: contig of 1170 bp in length 4281; gap of unknown length 14281; gap of unknown length 5508: gap of unknown length 7746: contig of 1020 bp in length 7746: contig of 1020 bp in length 7746: contig of 1052 bp in length 1658: gap of unknown length 10064: contig of 1052 bp in length 10164; gap of unknown length 10164; gap of unknown length 11371; contig of 1050 bp in length 11371; contig of 1010 bp in length 14501: contig of 1011 bp in length 1539; gap of unknown length 16504; contig of 1011 bp in length 16394; gap of unknown length 16504; contig of 1033 bp in length 16504; contig of 1033 bp in length 16394; gap of unknown length 16394; gap of unknown length 16394; gap of unknown length 16394; gap of unknown length 13137; contig of 4405 bp in length 13137; contig of 4405 bp in length 13137; contig of 4405 bp in length 17266; gap of unknown length 17266; gap of unknown length 17266; gap of unknown length 17266; gap of unknown length 17266; gap of unknown length 17266; gap of unknown length 17266; gap of unknown length 17266; gap of unknown length 17266; gap of unknown length 17266; gap of unknown length 17266; gap of unknown length 17266; gap of unknown length 17266; gap of unknown length 17266; gap of unknown length 17266; gap of unknown length 17266; gap of unknown length 17266; gap of unknown length 17266; gap of unknown length 17266; gap of unknown length 17266; gap of unknown length 17266; gap of unknown length 17266; gap of unknown length 17266; gap of unknown length 17266; gap of unknown length 17266; gap of unknown length 17266; gap of unknown length 17266; gap of unknown length 17266; gap of unknown length 17266; gap of unknown length 17266; gap of unknown length 17266; gap of unknown length 17266; gap of unknown length 17266; gap of unknown length 17266; gap of unknown length 17266; gap of unknown length 17266; gap of unknown length 17266; gap of unknown length 17266; gap of unk

The invention relates to human breast specific nucleic acids (I)

C comprising: (a) a sequence encoding any one of 95 protein sequences

C (ABV65614-ABP66708); (b) any one of 115 polymucleotide sequences

C (ABV6358-ABV83672); (c) a molecule that selectively hybridizes to (a) or

C (b); (d) a molecule having at least 60% sequence identity to (a) or (b).

The breast specific nucleic acid molecules, polymeptides and antibodies

CC The breast cancer and non-cancerous disease states in breast tissue.

CT reating breast cancer and non-cancerous disease states in breast tissue.

CT They are also useful for producing transgenic animals and cells and

CT producing engineered breast tissue for treatment and research. The

CT producing animals are useful as animal model systems used in elaborating

CT disorders associated with aberrant expression and in screening for

C compounds effective in ameliorating the conditions. The polymucleotides

C are useful for gene therapy and in vaccines
                                                                                                                                                                                                          New isolated breast specific nucleic acid molecules and polypeptides, useful for identifying, diagnosing, monitoring, staging, imaging and treating breast cancer and non-cancerous disease states in breast tissue.
                                                                                                                                                                                                                                                                                                               Claim 1; Page 170-171; 254pp; English.

which to AAC77606 encode the proteins given in AAB40237 to AAB43397, which represent the human ORFX open reading frames 1 to 3161. The ORFX sequences have activities such as: cytostatic; hepatotropic; vulnerary; antipartitic; antipartkinsonian; nootropic; neuroprotective; osteopathic; anticorvulsant; antiarthitic; immunosuppressant; immunostimulant; cardiant; thrombolytic; coagulant; vasotropic; antidiabetic; prypotensive; dermatological; immunosuppressive; antidiabetic; prypotensive; dermatological; immunosuppressive; antithyroid; antibacterial; nantivital; antifungal; antitheumatic; antithyroid; and antibacterial; to, or preventing or treating pathological conditions associated with an ORFX-associated disorder. The nucleic acids can be used to express ORFX proteins in gene therapy vectors. The proteins and nucleic acids may be used to treat cancers, proliferative disorders, neurodegenerative

                                                                                                                                                                                                                                                             The present invention relates to novel human secretory or membrane proteins (ADAS4072-ADAS5710) and their coding sequences (ADAS2433-ADAS4071). The coding sequences are useful in the gene therapy of diseases caused by abnormalities of the proteins, e.g. cancer, inflammatory diseases, osteoporosis or neurological disease.

ABL29730

```
The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention is useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL16176-ABL30511), expressed DNA ABB72072). The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                           developmental biology; cell signalling; insecticide;
                                   Drosophila melanogaster genomic polynucleotide SEQ ID NO 40666.

Novel polypeptide useful for treating neurodegenerative diseases, myeloid or lymphoid dell disorders, bone disorders, mechanical and traumatic disorders, coagulation disorders, and inflammatory diseases.

Claim 1; Page; 612pp; English.

This invention relates to the cDNA sequences encoding an isolated novel human polypeptide. The protein encoded by the nucleic acid of the convention is useful for treating central and peripheral nervous system diseases (e.g. peripheral neuropathy, Huntington's disease, amyotrophic clateral scleroats); neurodegenerative disease (e.g. Parkinson's disease, anyotrophic clateral scleroats); neurodegenerative disease (e.g. Parkinson's disease, anyotrophic clateral scleroats, rheumatoid arthritis, insulin-dependent diabetes mellitus) crancers, burns; bone disorders (e.g. systemic lugus clateral); nechanical and traumatic disorders (e.g. stroke, head trauma); lung or liver fibrosis; reperfusion injury in various tissues; osteoarthritis); asthma; coagulation disorders (e.g. septic shock, crancer and tumours; and inflammatory diseases (e.g. septic shock, Crohn's disease, anaphylaxis). The protein may be used to inhibit the growth, crifection or function of infectious agents such as bacteria, fungi, viruses, or to effect bodily characteristics, biorhythms or circadian cycles of rhythms. The protein may also have cycles of rhythms. The protein may also have creating, immune stimulating or suppressing, chemotactic/chemokinetic, haemostatic and thrombolytic, receptor/ligand, and antinflammatory crecumbinant protein for analysis. The present sequence represents a novel human cDNA sequence of the invention, this sequence is an expressed cycle sequence tag (EST) and was identified using subtractive hybridisation.

                                                                                                                                                                                                                                                                                                                The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention is useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL16176-ABL30511), expressed DNA ABB72072). The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       CARGREGICITETIC CARGREGICITETIC CARGREGICITETIC CARGREGICITETIC SS8

(HUMA-) HUMAN GENOME SCI INC

Ruben SM Rosen CA, Barash SC, Nucleic acids encoding 3224 human nervous system antigen polypeptides, useful for preventing, diagnosing and/or treating nervous system cancers and metastases.

Disclosure, SEQ ID NO 7587; 1701pp + Sequence Listing; English

```
The invention relates to novel genes (ABA11004-ABA21534) and proteins coefficiens e.g. by protein or gene therapy. The genes are medical conditions e.g. by protein or gene therapy. The genes are medical conditions e.g. by protein or gene therapy. The genes are coefficient or genes are an edge of human tissues disclosed in the specification.

The nucleic acids, proteins, antibodies and (ant) agonists are useful in the nucleic acids, treatment and prevention of: (a) cancer, e.g. breast and covarian cancer and other cancers of the adrenal gland, bone, bone marrow, breast, gastrointestinal tract, liver, lung, or urogenital; (b) immune constructions of discase, allergies, autoimmune haemolytic anaemia, autoimmune thyroiditis, diabetes mellitus, Crohn's discase, cardiovascular discrders such as myocardial isohaemias; (d) wound healing conditions diseases such as viral, bacterial inchaemias, (d) wound healing confections diseases e.g. cerebral anoxia and parasitic confections diseases e.g. cerebral anoxia and epilepsy; and (f) infections diseases such as viral, bacterial, fungal and parasitic confections. Note: The sequence data for this patent did not form part of the princed specification, but was obtained in electronic format directly conference of the princed specification, but was obtained in electronic format directly conference and parasity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        1359 TGTGTGTGTGTGTCTCCTCACTCTTTCATCATTACATAGTAGTATAATAA 1418

New nuclear fertility restorer genes, useful for restoring fertility in cytoplasmic male-sterile plants such as Brassica napus plants, or for increasing production of viable pollen in a plant.

ö

```
The invention relates to a method used for evaluating the toxicity of an agent comprising determining the expression of a rat toxic response grent(s) in the test animal in response to the agent. The method is useful in drug development, particularly for conducting toxicity studies and analysis before a new drug or compound is approved for human consumption
                                                                                                                                                                                                                                                                                                                         1348 GTGTGTGTGTGTGTGTGTGTGTCTCCTCACTCTTTCATCCTATCATTACATAGTAG 1407
                                              The invention comprises the amino acid and coding sequences of isolated fertility restorer proteins. The DNA and protein sequences of the invention are useful for restoring fertility in male sterile plants, such as Brassica napus plants. The DNA and protein sequences of the invention are useful for increasing production of viable pollen in a plant. The DNA and protein sequences are also useful as selection markers to identify transformed plant cells. The present genomic DNA sequence contains coding sequences for fertility restorer proteins of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Evaluating the toxicity of an agent, useful in drug development or in determining toxicological responses to a new drug, by determining the expression of rat toxicologically relevant genes in the test animal in response to the test agent.
                                                                                                                                                                                                               Other;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Rat; toxicity study; rat toxic response gene; toxicological response; drug development; phase-1 rat CT gene; ds.

The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention is useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA aequences (ABL16176-ABL30511), expressed DNA ABB72072). The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences

The present invention describes an isolated nucleic acid (I) comprising a single nucleotide polymorphism (SNP) chosen from: (i) a nucleic acid of Salmo salar SNPs, concokronism injoricus SNPs or Atlantic halibut SNPs; cand (ii) a nucleic acid having nucleotide sequence that hybridises to complement under highly stringent hybridisation conditions. Also described: (I) an isolated objoundleotide (II) comprising at least I contiguous nucleotides of a nucleotide sequence of S. salar SNPs, O. niloticus SNPs, O. niloticus microsatellites, Atlantic halibut SNPs, cod polymorphic sites and seabass polymorphic sites, or thear complement; (2) a primer pair (III) suitable for use in PCR, comprising two (II) capable of amplifying a nucleotide sequence chosen from S. salar SNPs and, O. or niloticus SNPs, O. niloticus microsatellites, Atlantic halibut SNPs, cod polymorphic sites and seabass polymorphic sites, or thear complement; (2) applymorphic sites and seabass polymorphic sites, and determining (MI) the origin of fish sample comprising providing a parentage genotype database complements a distinct origin, and comparing a sample genotype to the parentage genotype database, where a match between condidate parent genotype to the parentage genotype database, where a match between condidate parent genotype identifies to the sample genotype and one of the candidate parent genotype identifies to the origin of the sample such as family salmonidae, S. salar, Tilapia, O. niloticus, rainbow trout, halibut, seabass and Atlantic cod. (II) is useful for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Novel isolated nucleic acid molecule comprising single nucleotide polymorphism associated with fish, useful for forming PCR primers which are used for detecting single nucleotide polymorphisms in fish nucleic
                                                                                                                                                                                     single nucleotide polymorphism; SNP; fish, Salmo salar; Orechromis niloticus; Atlantic halibut; microsatellite; cod; polymorphic site; seabass; salmonidae; Tilapia; rainbow trout; halibut; detection; gene; ds.

New recombinant nucleic acid encoding carcinoma associated protein, useful for preparing compositions for treating carcinomas.

The invention relates to recombinant carcinoma associated (CA) nucleic acid sequences from mouse and human (ADA01482-ADA03094), and to recombinant carcinoma associated proteins (CAP) encoded by them. The invention also encompasses expression vectors and host cells comprising a CA nucleic acid, a polypeptide (especially an antibody) that specifically binds to the protein, and a biochip comprising CA nucleic acid or Claim 1; SEQ ID NO 1319; 245pp; English

fragments thereof. The sequences of the invention were identified using oncogenic retroviruses, which insert into the genome of the host organism at random. Many of these do not carry transduced host oncogenes or pathogenic trans-acting viral genes, meaning that cancer incidence is a direct consequence of the effects of proviral integration into host protoconcogenes. The CA nucleic acid sequences can be used to diagnose carcinoma (sepecially breast cancer, prostate cancer, lymphoma or a propensity to carcinoma by determination of the sequence of a CA gene, or by determination of CA gene expression in particular cissues. CA nucleic acids, proteins and antibodies are also useful as therapeutic agents and in screening and evaluating drug candidates. The present sequence represents a specifically claimed murine CA nucleic acid sequence of the invention. Note: The complete sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at the print of the printed specification, but was obtained the winted pot_sequences. ò Sequence 67832 BP; 17054 A; 15504 C; 15824 G; 18278 T; 0 U; 1172 Other; Gaps . 0 Length 67832; 16; Indels 61764 Grenererererererererererarerracereaaacter 61802 1348 grandrardrardrardrardrarcracycoccutr 1386 y Match

Further information can be found at http://www.sanger.ac.uk/HGP/Lns9
RP11-9M16 is from the library RPCI-11.1 constructed by the group of pieter de Jong. For further details see http://www.chori.org/bacpac/home.htm
VECTOR: pBACe3.6
IMPORTANT: This sequence is not the entire insert of clone RP11-9M16 it may be shorter because we sequence overlapping sections only once, except for a 100 base overlap.
The true right end of clone RP11-9M16 is at 132322 in this sequence. The true left end of clone RP11-9M23323 in this sequence. The true left end of clone RP11-9M23323 is at 124695 in this sequence.
Submitted (27-JUN-2001) Sanger Centre, Hinxton, Cambridgeshire, CB10 15A, UK. E-mail enquiries: humquery@sanger.ac.uk Clone requests: clonereques@sanger.ac.uk
On Jun 28, 2001 this sequence version replaced gi:14456172.
During sequence assembly data is compared from overlapping clones. Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.

This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one M13 subclone; and the assembly was confirmed by restriction digest. The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases: Emi. EMBL; Sw., SWISSPROT; Tr., TREMBL; Wp., WORMPEP; Information on the WORMPEP than the langer of the property of the langer on the found at the langer of the longer of the langer of the langer of the langer of the langer of the langer of the langer of the langer of the langer of the langer of the langer of the langer of the langer of the langer of the langer of the langer of the langer of the langer of the langer of the langer of the langer of the langer of the langer of the langer of the langer of the langer of the langer of the langer of the langer of the langer of the langer of the langer of the langer of the langer of the langer of the langer of the langer of the langer of the langer of the langer of the langer of the langer of the langer of the langer of the langer of the langer of the langer of the langer of the langer of the langer of the langer of the langer of the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Submitted (15-NOV-2002) Human Genome Sequencing Center, Department Submitted (15-NOV-2002) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, 17030, USA.

On Nov 15, 2002 this sequence version replaced gi:23664478 reads and whole genome shotgun sequencing reads assembled using Atlas (http://www.ngsc.bcm.tmc.edu/projects/rat/). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Mithin each contig-scaffold, individual sequence contigs are ordered and oriented, and separated
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Unpublished

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               * NOTE: Estimated insert size may differ from sequence length

* (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).

* NOTE: This is a 'working draft' sequence. It currently

* consists of 2 contigs. The true order of the pieces

* is not known and their order in this sequence record is

* arbitrary. Gaps between the contigs are represented as

* runs of N, but the exact sizes of the gaps are unknown.

* This record will be updated with the finished sequence

* as soon as it is available and the accession number will

* be preserved.
by sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole senome shotgun sequence reads. Both end sequences and whole genome shotgun sequence only contigs will be indicated in the feature table.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            220152 AGGCAGTGAAGCTGCTCAAGTCATCCCGGCACCTCATCCTGACCGTGAAGGACGTCAGGAA

* (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).

* NOTE: This is a "working draft' sequence. It currently

* consists of 1 contigs. Gaps between the contigs

* are represented as runs of N. The order of the pieces

* is believed to be correct as given, however the sizes

* of the gaps between them are based on estimates that have

* provided by the submitter.

* This sequence will be replaced

* by the finished sequence as soon as it is available and

* the accession number will be preserved.

During sequence assembly data is compared from overlapping clones. Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with only asmall overlap as described above. This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one M13 subclone; and the assembly was confirmed by restriction digest. The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases: Em:, EMBL; Sw.; SWISSPROT; Tr., TREMBL; WORMPEP; Information on the WORMPEP

Biotechnology, Beutenberstr. 11, Jena 07745, Germany

* NOTE: This is a "working draft" sequence. It currently

* consists of 3 contigs. The true order of the pieces

* is not known and their order in this sequence record is

* arbitrary. Gaps between the contigs are represented as

* runs of N, but the exact sizes of the gaps are unknown.

* This record will be updated with the finished sequence

* as soon as it is available and the accession number will

* be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    186308 GGAGTACCCTCCACCTCCTGCAGAGTGAGAAAAAAGGTGAGATTGACACT 186254
